

# USING OBSI RESULTS TO DEFINE STATISTICALLY SIMILAR PAVEMENTS IN MA

**John Hencken  
Rutgers University**

# Massachusetts Testing

- Utilized OBSI equipment to conduct a pavement noise evaluation in eastern Massachusetts
- Pavements tested spanned 8 years of age
- Tested 9.5mm Superpave, 19mm Superpave, OGFC, ARGG, and Novachip

# MA Concerns and Goals

- **Winter maintenance in the northeast is a big concern**
- **Interested in comparing different pavements quickly**
- **Pavement preservation is crucial to alleviate overall costs of the pavement over its lifetime**
- **Pavement preservation - \$\$ savings**
- **At the same time, keep noise levels low**

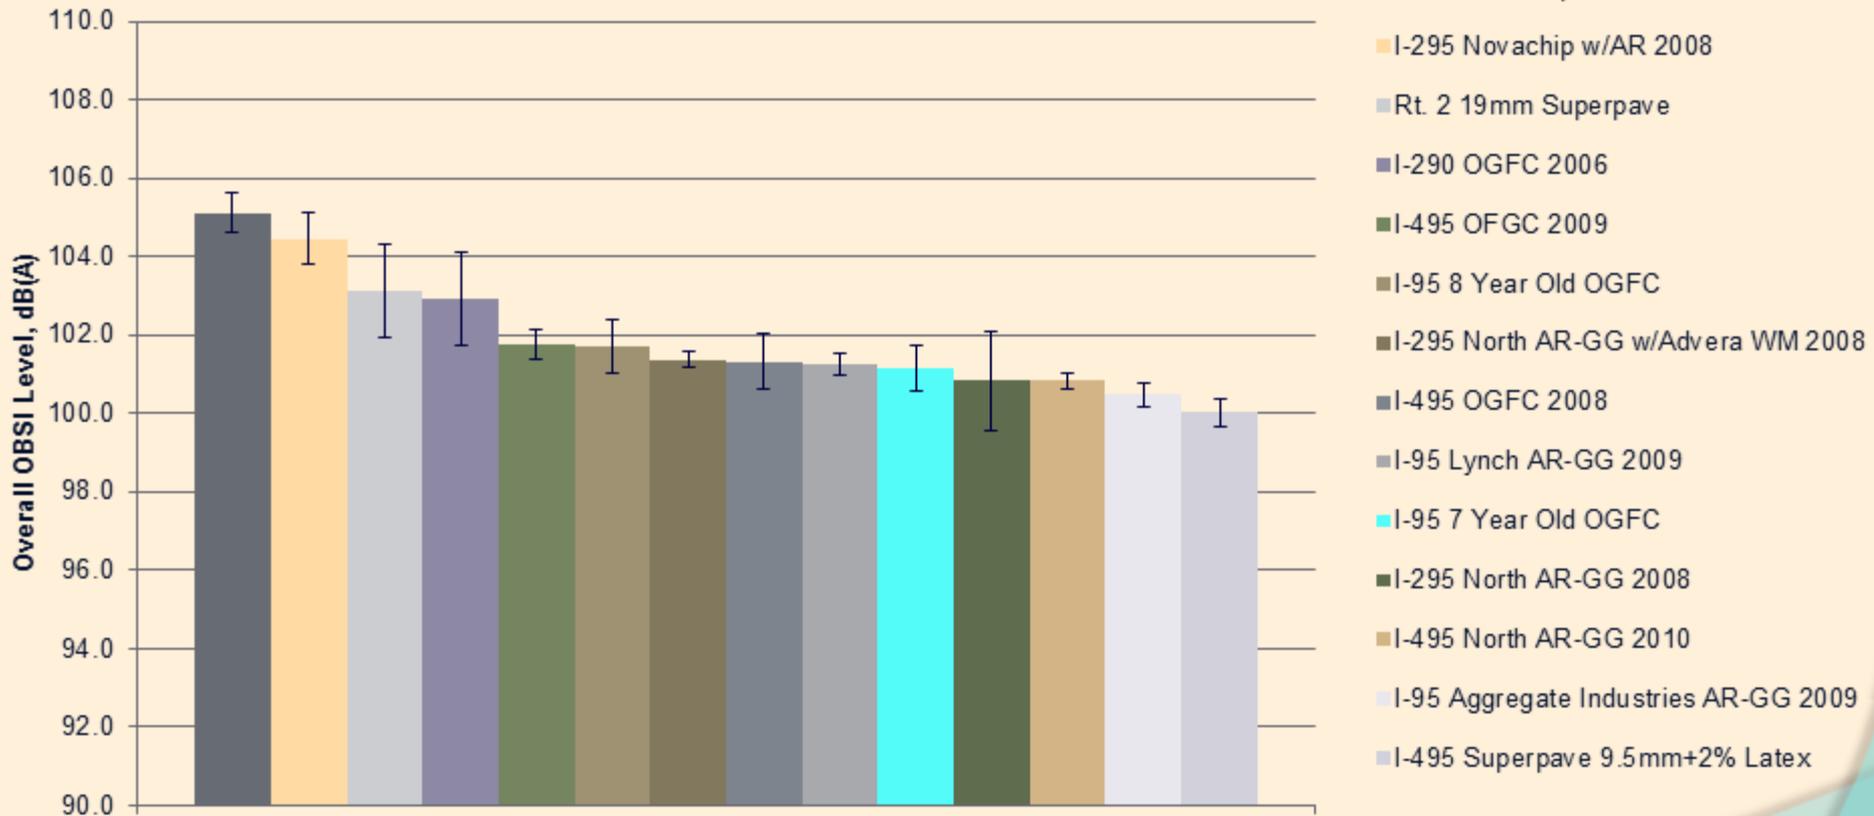

# OBSI Results

Table 1 – Overall Noise Levels

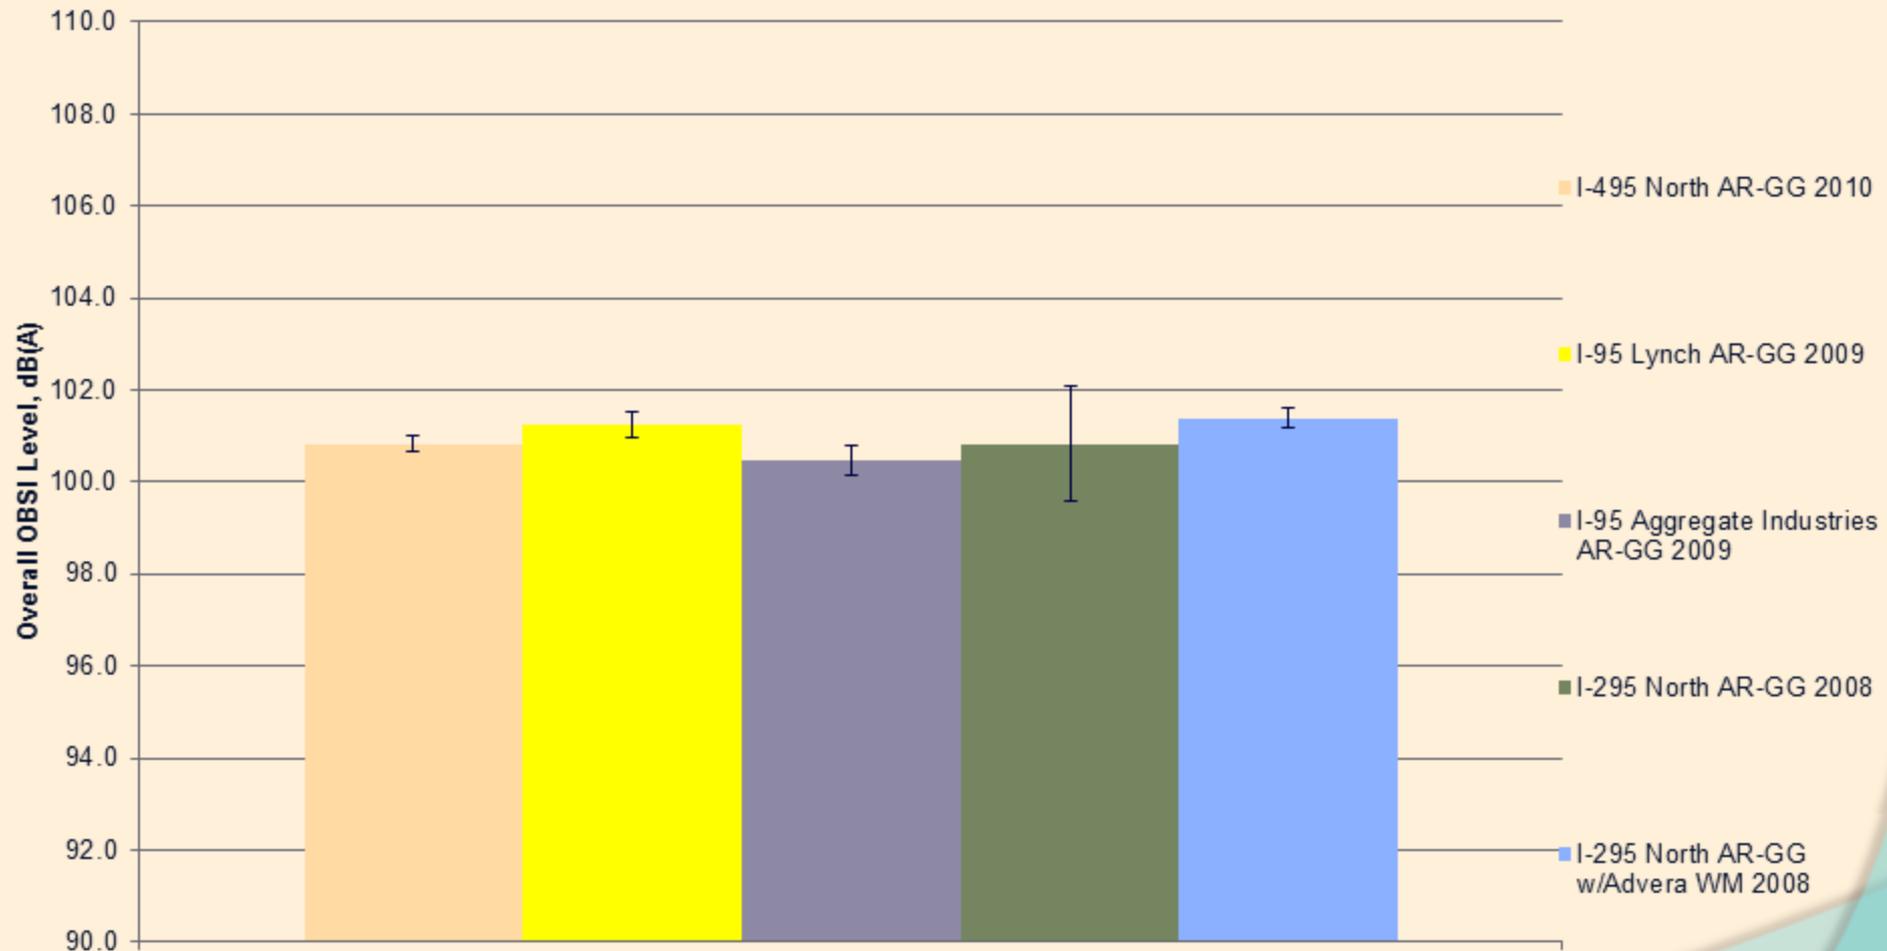

Road	Material	dB(A) Overall	Stdev (1s)
I-495 S	9.5mm Superpave + 2% Latex	100.0	0.4
I-495 N	ARGG 2009	100.5	0.7
I-95 S	ARGG 2009	100.5	0.2
I-95 N	ARGG 2009	100.5	0.2
I-295 N	ARGG 2008	100.8	1.2
I-495 N	ARGG 2010	100.8	0.2
I-95 S	7 year old OGFC	101.2	0.6
I-95 S	Lynch ARGG 2009	101.2	0.2
I-95 N	Lynch ARGG 2009	101.3	0.2
I-495 S	OGFC 2008	101.3	0.7
I-295 N	ARGG w/advera warm mix 2008	101.4	0.3
I-95 N	8 year old OGFC	101.7	0.7
I-495 S	OGFC 2009	101.8	0.4
I-495 N	OGFC 2008	102.0	0.2
I-290 E	OGFC 2006	102.9	1.2
I-290 W	OGFC 2006	102.9	1.2
Rt-2 E	19mm Superpave	103.1	0.6
Rt-2 W	19mm Superpave	103.1	0.6
I-295 S	Novachip w/asphalt rubber 2008	104.5	0.2
I-295 S	Novachip 2008	105.1	0.2

## Benefits

- **Some of the pavements were statistically similar!**
- **All of the pavements that were not expected to be similar were validated**
- **Some of the pavements that were expected to be similar were not**
- **The results lead to more interesting and more refined questions about specific pavements themselves**
