- International Commission on Illumination Technical Committee 4-40: Requirements for Retroreflective Traffic Signs

Overview

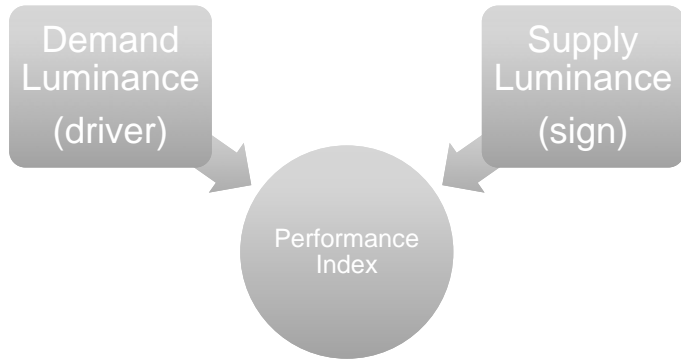

- Existing CIE Evaluation Process
- Development of Evaluation Process for Semi Trucks
- Additional Evaluation Results

Reference Scenario Example

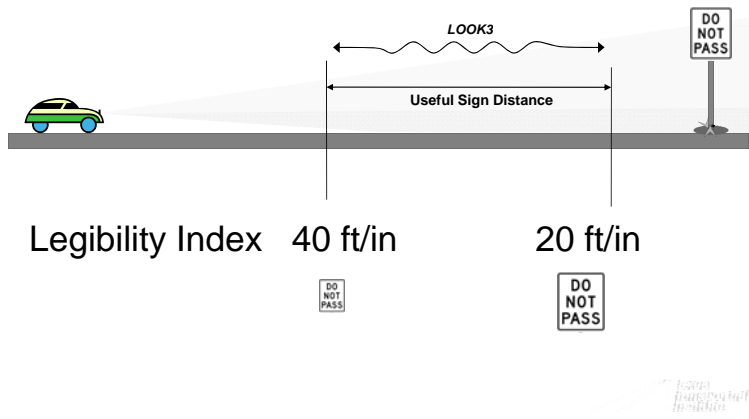

CIE Evaluation Process

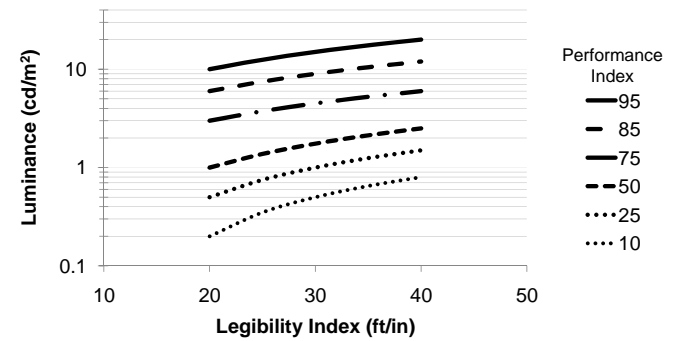

Demand Luminance

Demand Luminance

Demand Luminance

Distances Required for 16 inch Legend

Legibility Index (ft/in)	20	25	30	35	40
Distance (feet)	320	400	480	560	640

Demand Luminance (16 in Legend)

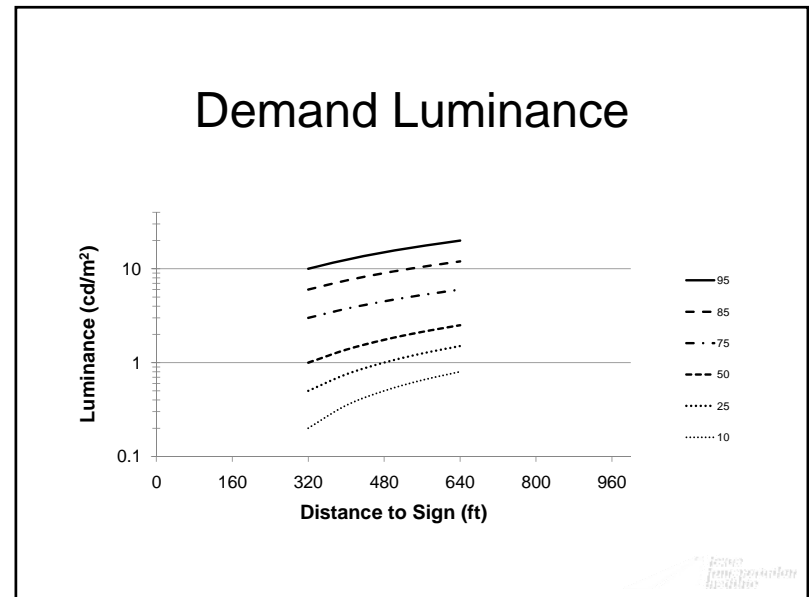

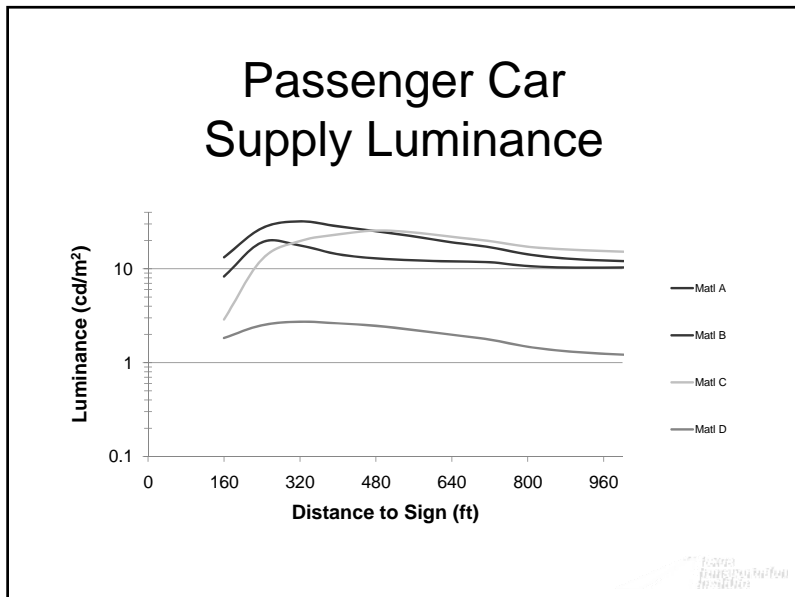

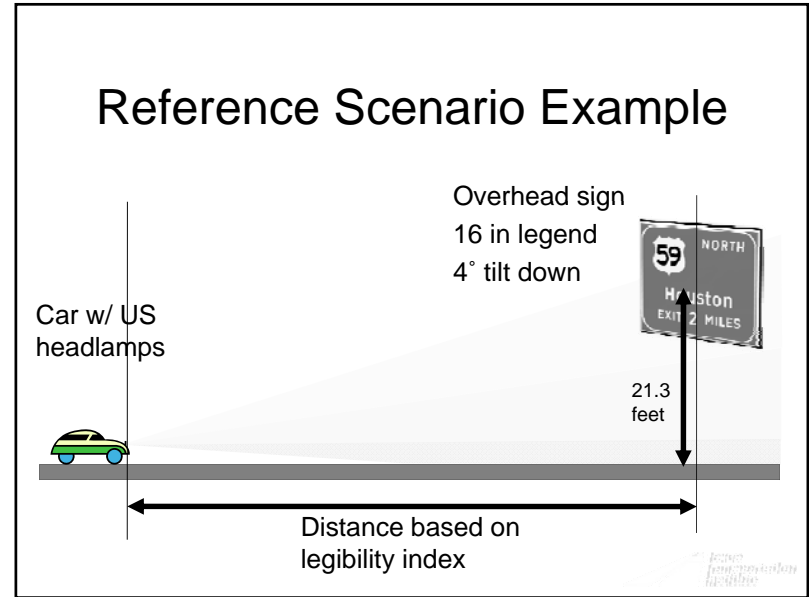

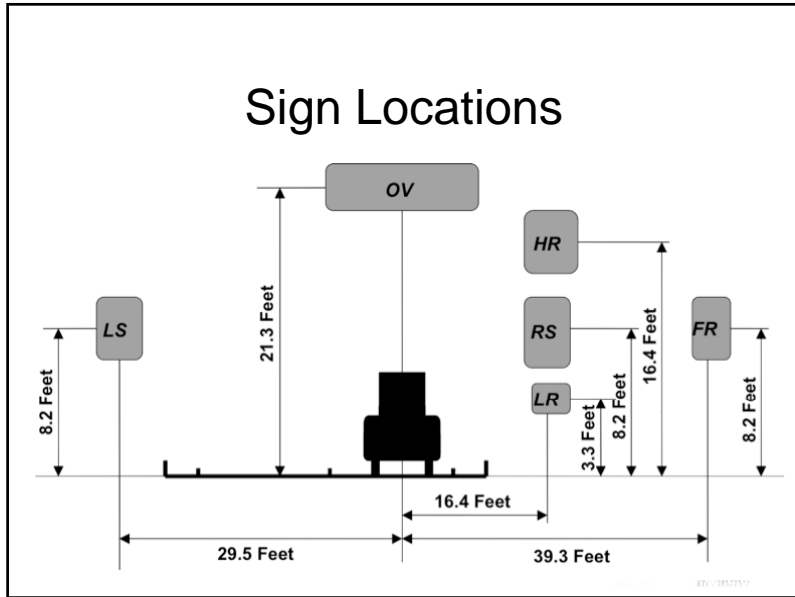

Supply Luminance

Reference Scenarios

- Vehicle Type
 - Passenger Car
 - Semi Truck
- Headlamp Type
 - European
 - US

Passenger Car Evaluation

Reference Scenario Example

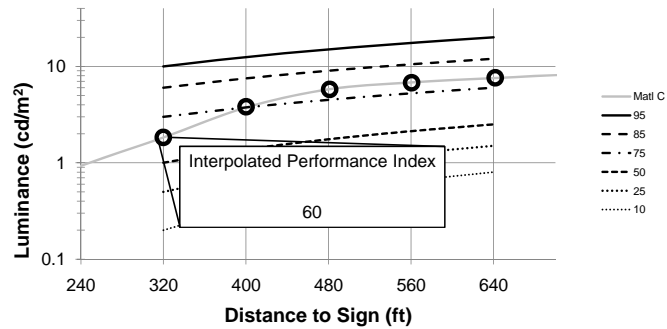

Supply Luminance Truck

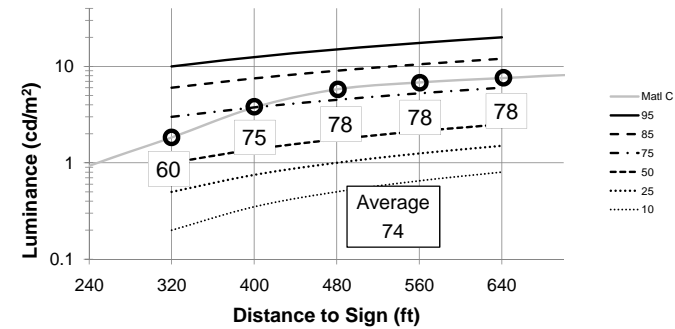

Truck Evaluation

Truck Evaluation

Truck Evaluation

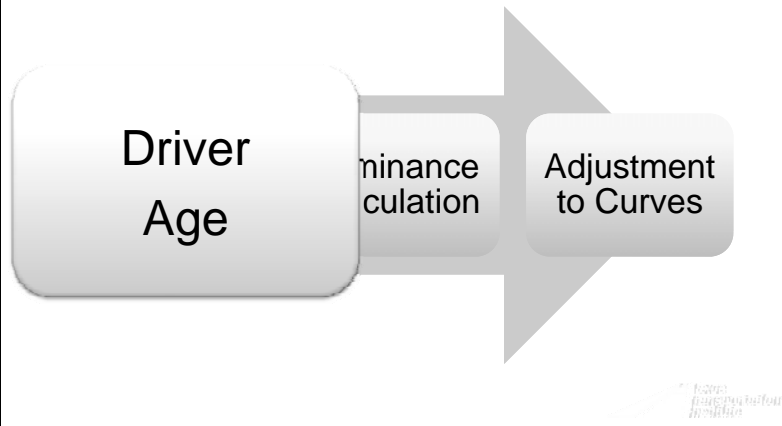

Performance Index

Limitations

- Typical sign locations
- Tangent sections
- Supply luminance from retroreflectivity
- Difference in driver demographics

Development of Performance Index Curves

Driver Age

- Existing Performance Index Curves
 - 36 subjects
 - Average age of 62 years
- Is there an age difference?

Licensed Drivers

Licensed Drivers		
Age	Percent of Total	Cumulative Percent
20 and Under	6.8	6.8
21 – 24	6.7	13.5
25 – 29	9.2	22.7
30 – 34	10.1	32.8
35 – 44	22.1	54.9
45 – 54	18.9	73.8
62 years		85 th percentile
65 and Over	14.3	100.0

Truck Drivers

Truck Drivers		
Age	Percent of Total	Cumulative Percent
20 and Under	0.0	0.0
21 – 24	3.4	3.4
25 – 29	9.0	12.4
30 – 34	12.0	24.4
35 – 44	32.8	57.1
45 – 54		83.4
55 Years		97.2
65 and Over	2.8	100.0

Development of Performance Index Curves

Calculation of Luminance

$$\log_{10} L = -0.545 + \frac{A}{46.27} + \frac{VA}{20.56} + (-212.9) \frac{SW}{D}$$

- Age in years (A)
- Snellen visual acuity (VA)
- Stroke width of the font (SW)
- Distance between driver and sign (D)

Source: Holick, A.J. and P.J. Carlson. Model of Overhead-Sign Luminance Needed for Legibility. *Transportation Research Record 1801*, Transportation Research Board, National Research Council, Washington, DC, 2002.

Driver Characteristics

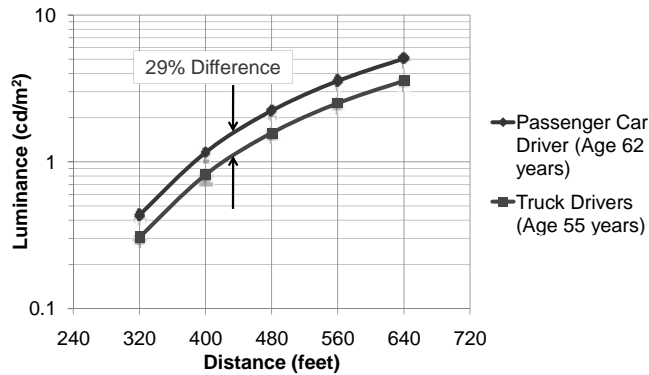

Variable	Passenger Car Drivers	Truck Drivers
Age (years)	62	55
Snellen Visual Acuity (denominator)	20/20	20/20

Scenario Characteristics

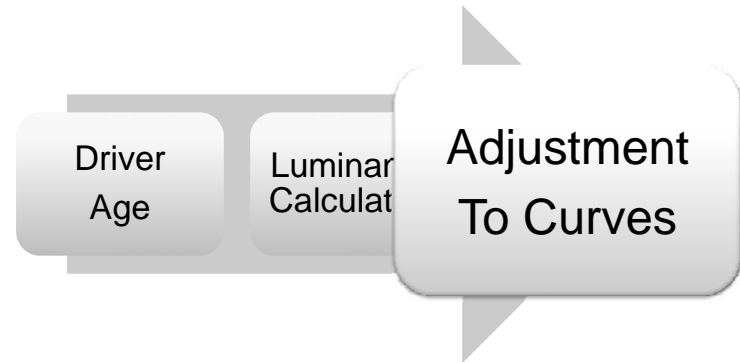

Overhead sign
16 in legend
 Stroke Width 20% legend height
3.2 Inches

Legibility Index (ft/in)	20	25	30	35	40
Distance (feet)	320	400	480	560	640

Calculation Results

Development of Performance Index Curves

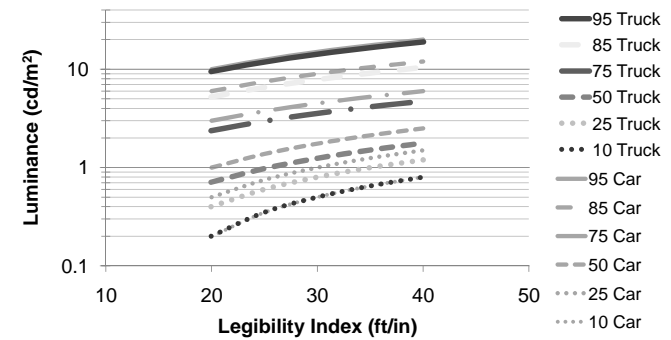

Adjustment for Truck Drivers

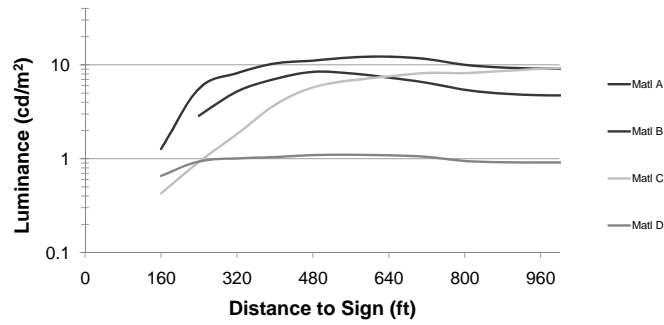

Performance Index	Percentage Reduction	Applied Factor
10	0%	1.00
25	20%	0.80
50	29%	0.71
75	21%	0.79
85	13%	0.87
95	5%	0.95

Adjustment of 29% applied to Performance Index of 50

Performance Index Curves for Truck Drivers

Supply Luminance Truck

Truck w/o Adjustments

Truck w/ Adjustments

Performance Index Overhead Sign

Performance Index Left Shoulder

Performance Index High Right Sign

Conclusions

- Traffic sign performance evaluation technique
- Based on CIE current proposed procedure
- Difference in age
